controware

Measure, then decide

Decivo

Trust the number. Then decide what to do about it.

software.controware.com

Every department has its own month

A workbook travels by email and changes on the way. The meeting argues about which number is right, runs out of time for decisions, and the plan is made by habit.

Decivo has two parts. KPI Cockpit shows how the plant is doing, with numbers that are entered, checked and approved. Qarar takes each number that is off target and works out the best plan to fix it.

What changes

Today	With Decivo
Which number is right?	One approved number, sealed for good
Meetings about data	Meetings about decisions
Plans made by habit	The best plan, worked out and explained

From a number to a decision

Enter

By people or by the line

Check

By a second person

Seal

The month is closed for good

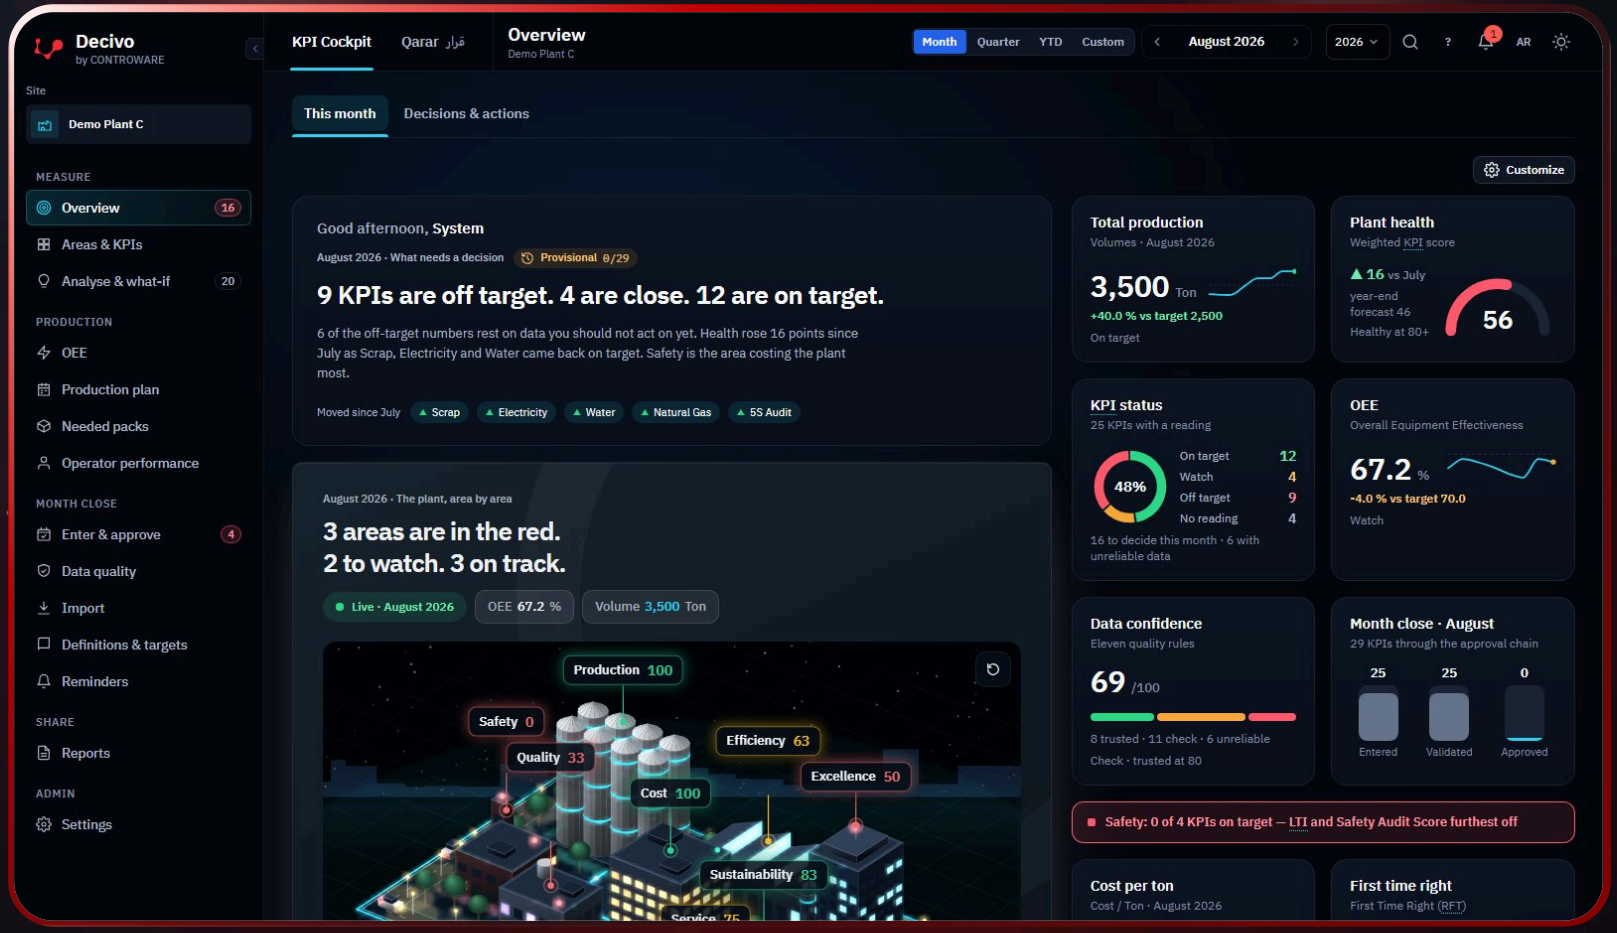
Plan

Qarar works out the best way

Decide

A second person approves the plan

What people see



The real Decivo screen. Customer names changed.

What you gain

Numbers you can trust

Every figure carries a confidence score.

The best plan, not a guess

Qarar compares its plan with your own way and shows which is better.

Worth in money

Each plan shows what it saves in a year.

Explained in plain words

Why this plan, what changed and what it rests on.

Two people, one decision

No plan goes ahead until a second person approves it.

Eight plans, ready to run

Production, batches, schedule, shifts, maintenance, waste, energy and recovery after a breakdown.

Who it is for

Operator	Enters the shift
Analyst	Checks the numbers
Engineer	Approves and seals the month
Manager	Decides on the plan Qarar proposes
